

Griffin Waste Services

Editors note: Teletrac Inc. and Navman Wireless are now merged as a global telematics powerhouse. This content was created prior to the unification of both brands.

Navman Wireless fleet-management solutions help a waste hauler save \$160,000 on fuel, labor costs

With each of the company’s small-container trucks racking up several hundred miles each day, Griffin Waste Services was paying a pretty penny in fuel and maintenance. The implementation of a Navman Wireless fleet-management solution has helped this waste hauler efficiently track and retool its operation.

Through the use of Navman Wireless’ products and services, Griffin gained the Fleet and Mobile Asset Intelligence needed to generate massive savings.

Identify areas for improvement

Robust reporting has helped the company detect excessive speeding and idling. Not only does this result in significant savings on fuel, it also means less wear and tear on vehicles and lower maintenance costs. Griffin dispatchers also employ Navman Wireless GPS tracking tools to route the closest driver for the job, cutting down on miles driven. Overall, fuel and maintenance costs have gone down by more than 10%.

Keeping drivers on the road, hard at work

With the Navman Wireless Geofence Alerts, Griffin’s dispatcher can track when a truck arrives at the landfill, the moment the container is emptied and when the vehicle is ready. The company estimates Navman Wireless GPS Tracking eliminates at least an hour of downtime per driver each day. At a billable rate of \$15 per hour, that adds up to \$75 per vehicle per week—\$300 per month.

Additional highlights from Navman Wireless

- Geofence Reports show the exact times a truck leaves in the morning and returns at night, eliminating payroll disputes.
- Activity Reports enable Griffin to monitor vehicle usage, from ignition on to ignition off, 24/7.
- Satellite mapping indicates the whereabouts of every truck in the fleet for optimal efficiency, productivity and customer service.
